gained.

**7/2014 - 3/2016**

**Team Member - KFC / TacoBell**

Ran the TacoBell line for both Inside and Drive-Thru.

## Projects

See more on my GitHub

### CarCare - iOS App

CarCare is an iOS application that notifies the user when  
it's time to give their car an oil change. Notifications are  
determined by a calculation that takes in the average  
amount of miles a user drives a year, and the miles they  
want between oil changes. CarCare was built on  
Apple's UIKit framework. It also uses local notification  
to notify the user it's time for a change. CloudKit is used  
for the backend to store car data and CKShare is used  
to add sharing functionality between contacts.

### Wi-Fi Connect - iOS App

Wi-Fi Connect is the first app that changes the way we  
connect to Wi-Fi for the better. Forget sharing  
passwords! Let your friends connect to Wi-Fi designed  
for the 21st century. Wi-Fi Connect uses a lot of cool  
tech. The API is GraphQL based and all data is persisted  
on the device using a SQLite Normalized Cache.  
Included in the app are Push Notifications for when you  
get a friend request or when your friend request gets  
accepted. AWS S3 is used for storing profile images and  
are cached using NSCache.
